Prompting for Project

1.Prompt

Craft good prompt including examples for every requirement listed below:
I m using SQL server & I want to create a banking dataset using which i will ultimately be creating a Power Bi report using sql server as data source .

Make sure data that you create has around 10000 records and it also has certain data cleaning issues so that i can learn about data cleaning using Power Query Editor

Also the dataset should be such that I will be able to represent 10 KPIs on 2 page power bi report (5 KPIs for each page)

Suggest those 10 KPIs along with chart recommendations & write DAX measures which will be required to create the KPIs & represent.

2.Prompt

Create KPIs recommendation table such that I can directly copy them

make sure you write recommendations for both pages with four column KPI, ,description,VISUAL & DAX

✳ Answer ┊ Steps

KPI Recommendations Table for Power BI Report

Below are **directly copyable KPI recommendations** for both pages of your banking dashboard. Each KPI entry includes its description, recommended visual, and a representative DAX measure or calculated column.

Page 1: Customer & Account Overview

KPI	Description	Visual	DAX / Calculated Column Example

Customer Gender Distribution	Proportion of customers by gender	Donut Chart / Stacked Column	`Customer Count by Gender =`
			`DISTINCTCOUNT(CombinedBankingDataset[CustomerID])`
			Axis: Gender, Values: Customer Count by Gender
